# VAGUE BINARY SOFT SETS AND THEIR PROPERTIES 

${ }^{1}$ Remya.P.B, ${ }^{2}$ Dr. Francina Shalini.A<br>${ }^{1}$ Ph.D Research Scholar, ${ }^{2}$ Assistant Professor<br>Department of Mathematics, Nirmala College for Women, Coimbatore, Tamil Nadu, India

Abstract: The aim of this paper is to introduce the novel concept vague binary soft sets and to characterize some of its properties.
Keywords: Vague binary set, vague binary soft set, vague binary soft equal set, vague binary soft complement, vague binary soft AND operation, vague binary soft OR operation
Notations: $\ddot{F}$ (e) represents the e-approximate element under the mapping $\ddot{F}$. Usual set theoretical operations with double dot on top will be used for vague binary soft set operations. Vague binary soft set is denoted by VBSS. Collection of all vague binary soft sets over the common universe $U_{1}, U_{2}$ under fixed parameter set A is denoted by $\operatorname{VBSS}\left(U_{1}, U_{2}\right)_{A}$

## 1. Introduction

In most of the real life situations, humanity is bound to face with loss of data, unclear data, game of chance etc. To overcome such situations, classical probability theory (Gerolamo Cardano, 1501-1575)[5], fuzzy set theory (Zadeh, 1965)[2,5], rough set theory (Pawlak, 1982)[2,5], intuitionistic fuzzy set theory (Attanassov, 1986)[2,5], vague set theory (Gaue \& Buehrer, 1993)[5], theory of interval mathematics (Moore, 1996)[5], neutrosophic set theory (Smarandache, 2005)[2] etc have played an important role. Inspired from 'Pawlak's work done in 1993', Molodtsov introduced soft sets in 1999. It has loosened all the existing rigid structure of classical sets by providing plenty of parameterization tools. Hybrid structures like fuzzy soft [3], soft fuzzy [3], neutrosophic soft [2], vague soft [2,4] etc developed later to make things more easier. All of them found rich with parameterization tools.

Later in 2016, Ahu Acikgöz [1] introduced binary soft sets with its operations and concluded that soft set can be given on n-dimension initial universal sets with a parameter set like F: A $\rightarrow \prod_{i=1}^{n} P\left(U_{i}\right)$, where $U_{i}$ are initial universal sets for $1 \leqslant i \leqslant n$ and A is the parameter set. Vague binary sets and Vague binary soft sets with two initial universal sets are introduced. Some of the basic operations for vague binary soft sets like union, intersection, complement, AND operation, OR operation, Cartesian product are introduced in this paper. Terms like null vague binary soft set, absolute vague binary soft set are also introduced.

## 2.Preliminaries

## Definition 2.1:[2,5]

A vague set A in the universe of discourse $\mathrm{U}=\left\{u_{1}, u_{2}, \ldots \ldots, u_{n}\right\}$ is characterized by two membership functions given by
(1) a truth membership function $t_{A}: \mathrm{U} \longrightarrow[0,1]$
(2) a false membership function $f_{A}: \mathrm{U} \longrightarrow[0,1]$ where $t_{A}\left(u_{i}\right)$ is a lower bound of the grade of membership of $u_{i}$ derived from the " evidence for $u_{i}$ " and $f_{A}\left(u_{i}\right)$ is a lower bound on the negation
of u derived from the "evidence against $u_{i}$ " and $t_{A}\left(u_{i}\right)+f_{A}\left(u_{i}\right) \leqslant 1$. Thus the grade of membership of $u_{i}$ in the vague set A is bounded by a sub-interval $\left[t_{A}\left(u_{i}\right), 1-f_{A}\left(u_{i}\right)\right]$ of [0,1]. This indicates that if the actual grade of membership is $\mu\left(u_{i}\right)$ then $t_{A}\left(u_{i}\right) \leqslant \mu\left(u_{i}\right) \leqslant f_{A}\left(u_{i}\right)$. The vague set A is written as $\mathrm{A}=\left\{\left(u_{i},\left[t_{A}\left(u_{i}\right), 1-f_{A}\left(u_{i}\right)\right]\right) / u_{i} \in \mathrm{U}\right\}$, where interval $\left[t_{A}\left(u_{i}\right), 1-f_{A}\left(u_{i}\right)\right]$ is called the vague value of $u_{i}$ in A denoted by $V_{A}\left(u_{i}\right)$

## Definition 2.2:[5]

Let $U$ be the initial universe and $E$ be the set of parameters. Let $P(U)$ denote the power set of $U$ and A be a non-empty subset of E . A pair $(\mathrm{F}, \mathrm{A})$ is called a soft set over U where F is a mapping given by $\mathrm{F}: \mathrm{A} \rightarrow \mathrm{P}(\mathrm{U})$
Definition 2.3:[2]
Let $U$ be a universe, $E$ be a set of parameters, $V(U)$ be the power set of vague set on $U$ and $A \subseteq B$. A pair ( $F, A$ ) is called a vague soft set over $U$ where $F$ is a mapping given by $F: A \rightarrow V(U)$. In other words, a vague soft set over $U$ is a parameterized family of vague sets of the universe $U$. For $\mathrm{e} \in \mathrm{A}, \mu_{F(e)}: \mathrm{U} \rightarrow[0,1]$ is regarded as the set of e-approximate elements of the vague soft sets.

## Definition 2.4:[1]

Let $U_{1}, U_{2}$ be two initial universal sets and E be a set of parameters. Let $\mathrm{P}\left(U_{1}\right), \mathrm{P}\left(U_{2}\right)$ denote the power set of $U_{1}, U_{2}$ respectively. Also let $\mathrm{A}, \mathrm{B} \subseteq \mathrm{E}$. A pair $(\mathrm{F}, \mathrm{A})$ is called a binary soft set over $U_{1}, U_{2}$ where F is defined as below $\mathrm{F}: \mathrm{A} \rightarrow \mathrm{P}\left(U_{1}\right) \times \mathrm{P}\left(U_{2}\right), \mathrm{F}(\mathrm{e})=(\mathrm{X}, \mathrm{Y})$ for each $\mathrm{e} \in \mathrm{A}$ such that $\mathrm{X} \subseteq U_{1}, \mathrm{Y} \subseteq U_{2}$

## 3. Vague binary soft sets

In this section vague binary sets and vague binary soft sets are introduced with some examples Definition 3.1:
A vague binary set A in a common universe $U_{1}, U_{2}$ is an object of the form
$\mathrm{A}=\left\{\left(\left\langle\frac{V_{\mathrm{A}}\left(x_{i}\right)}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{V_{\mathrm{A}}\left(y_{i}\right)}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}$
$V_{A}\left(x_{i}\right)=\left[t_{A}\left(x_{i}\right), 1-f_{A}\left(x_{i}\right)\right] ; V_{A}\left(x_{i}\right): U_{1} \rightarrow[0,1] ; V_{A}\left(y_{i}\right)=\left[t_{A}\left(y_{i}\right), 1-f_{A}\left(y_{i}\right)\right] ; V_{A}\left(y_{i}\right): U_{2} \rightarrow[0,1]$
Example 3.2:
Let $U_{1}=\left\{b_{1}, b_{2}, b_{3}\right\}$ and $U_{2}=\left\{l_{1}, l_{2}, l_{3}\right\}$ be food varieties for break-fast and lunch respectively.
Availability of these items in a particular hotel can be given using a vague binary set say A as
$\mathrm{A}=\left\{\left(\left\langle\frac{[0.3,0.5]}{b_{1}}, \frac{[0.5,0.7]}{b_{2}}, \frac{[0.7,0.9]}{b_{3}}\right\rangle,\left\langle\frac{[0.4,0.5]}{l_{1}}, \frac{[0.6,0.8]}{l_{2}}, \frac{[0.8,0.9]}{l_{3}}\right\rangle\right)\right\}$

## Definition 3.3:

Let $U_{1}, U_{2}$ be two initial universes which is common to a set E of parameters. Let $\mathrm{V}\left(U_{1}\right), \mathrm{V}\left(U_{2}\right)$ denote power set of vague sets on $U_{1}, U_{2}$ respectively and $\mathrm{A} \subseteq \mathrm{E}$.
A pair $(\ddot{F}, \mathrm{~A})$ is said to be a vague binary soft set over $U_{1}, U_{2}$ where $\ddot{F}$ is a mapping given by $\ddot{F}: \mathrm{A} \rightarrow \mathrm{V}\left(U_{1}\right) \times \mathrm{V}\left(U_{2}\right)$ and
$(\ddot{F}, \mathrm{~A})=\{\mathrm{e} \in \mathrm{A} /(\mathrm{e}, \ddot{F}(\mathrm{e}))\}$ where $\ddot{F}(\mathrm{e})=\left\{\left(\left\langle\frac{V_{\ddot{F}(\mathrm{e})}\left(x_{i}\right)}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{V_{\ddot{F}(\mathrm{e}}\left(y_{i}\right)}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}$

## Example 3.4:

In example 3.2. add a parameter set for characteristics of different hotels say, $\mathrm{E}=\left\{e_{1}=\right.$ luxury, $e_{2}=$ famous, $e_{3}=$ warm serviced, $e_{4}=$ early check-in and late check-out, $e_{5}=$ honest information, $e_{6}=$ hospitality $\}$. A customer's preferences are given by the parameter set $\mathrm{A}=\left\{e_{3}, e_{6}\right\}$.
Vague binary soft set according to their interest is given as,
$(\ddot{F}, \mathrm{~A})=\left\{\begin{array}{l}\left(e_{3},\left(\left\langle\frac{[0.3,0.5]}{b_{1}}, \frac{[0.5,0.7]}{b_{2}}, \frac{[0.7,0.9]}{b_{3}}\right\rangle,\left\langle\frac{[0.4,0.5]}{l_{1}}, \frac{[0.6,0.8]}{l_{2}}, \frac{[0.8,0.9]}{l_{3}}\right\rangle\right)\right), \\ \left(e_{6},\left(\left\langle\frac{[0.4,0.6]}{b_{1}}, \frac{[0.6,0.8]}{b_{2}}, \frac{[0.8,0.9]}{b_{3}}\right\rangle,\left\langle\frac{[0.4,0.8]}{l_{1}}, \frac{[0.3,0.5]}{l_{2}}, \frac{[0.7,0.9]}{l_{3}}\right\rangle\right)\right)\end{array}\right\}$

## Definition 3.5:

A VBSS $(\ddot{F}, \mathrm{~A})$ over $U_{1}, U_{2}$ is said to be a null vague binary soft set denoted by $(\ddot{\varnothing}, \mathrm{A})$ if $\left[t_{\ddot{F}(\mathrm{e})}\left(x_{i}\right), 1-f_{\ddot{F}(\mathrm{e})}\left(x_{i}\right)\right]=[0,0] ; \forall x_{i} \in U_{1}, \forall \mathrm{e} \in \mathrm{A} ;$
$\left[t_{\ddot{F}(\mathrm{e})}\left(y_{i}\right), 1-f_{\ddot{F}(\mathrm{e})}\left(y_{i}\right)\right]=[0,0] ; \forall y_{i} \in U_{2}, \forall \mathrm{e} \in \mathrm{A}$

## Definition 3.6:

A VBSS $(\ddot{F}, \mathrm{~A})$ over $U_{1}, U_{2}$ is said to be an absolute vague binary soft set denoted by $(\ddot{U}, \mathrm{~A})$ if $\left[t_{\ddot{F}(\mathrm{e})}\left(x_{i}\right), 1-f_{\ddot{F}(\mathrm{e})}\left(x_{i}\right)\right]=[1,1] ; \forall x_{i} \in U_{1}, \forall \mathrm{e} \in \mathrm{A} ;$
$\left[t_{\vec{F}(\mathrm{e})}\left(y_{i}\right), 1-f_{\ddot{F}(\mathrm{e})}\left(y_{i}\right)\right]=[1,1] ; \forall y_{i} \in U_{2}, \forall \mathrm{e} \in \mathrm{A}$

## 4. Vague binary soft set operations

Operations on vague sets are natural generalizations of corresponding operations on fuzzy sets

## Definition 4.1:

Let $U_{1}, U_{2}$ be two non-empty universal sets common to the fixed parameter set E and
$(\ddot{F}, \mathrm{~A})=\{\mathrm{e} \in \mathrm{A} /(\mathrm{e}, \ddot{F}(\mathrm{e}))\} ; \ddot{F}(\mathrm{e})=\left\{\left(\left\langle\frac{V_{\ddot{F}(\mathrm{e})}\left(x_{i}\right)}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{V_{\ddot{F}(\mathrm{e})}\left(y_{i}\right)}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}$
$(\ddot{G}, \mathrm{~B})=\{\mathrm{e} \in \mathrm{B} /(\mathrm{e}, \ddot{G}(\mathrm{e}))\} ; \ddot{G}(\mathrm{e})=\left\{\left(\left\langle\frac{V_{\ddot{G}(\mathrm{e})}\left(x_{i}\right)}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{V_{\ddot{G}(\mathrm{e})}\left(y_{i}\right)}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}$ are 2 VBSS's.
Vague binary soft union of these two sets is denoted by ( $\ddot{F}, \mathrm{~A}) \ddot{U}(\ddot{G}, \mathrm{~B})$. Let it be ( $\ddot{H}, \mathrm{C}$ ).
Here $C=(A \cup B) ; U$ represents the usual set theoretic operation. Then $\forall e \in C$,
$\ddot{H}(\mathrm{e})=\ddot{F}(\mathrm{e}) \quad ; \mathrm{e} \in(\mathrm{A}-\mathrm{B})$
$\ddot{G}(\mathrm{e}) \quad ; \mathrm{e} \in(\mathrm{B}-\mathrm{A})$
$\ddot{F}(\mathrm{e}) \cup \ddot{G}(\mathrm{e}) ; \mathrm{e} \in(\mathrm{A} \cap \mathrm{B})$

$$
\begin{aligned}
& t_{\ddot{H}(\mathrm{e})}=t_{\ddot{F}(\mathrm{e})}\left(x_{i}\right) \\
& t_{\ddot{G}(\mathrm{e})}\left(x_{i}\right) \\
& t_{\ddot{F}(\mathrm{e})}\left(y_{i}\right) \\
& \mathrm{e} \in(\mathrm{~B}-\mathrm{B}), \forall x_{i} \in U_{1} \\
&, \forall \mathrm{x}_{i} \in U_{1} \\
& \\
& ; \mathrm{e} \in(\mathrm{~A}-\mathrm{B}), \forall y_{i} \in U_{2}
\end{aligned}

\min \left(1-f_{\ddot{F}(\mathrm{e})}\left(\mathrm{y}_{\mathrm{i}}\right), 1-f_{\ddot{G}(\mathrm{e})}\left(\mathrm{y}_{\mathrm{i}}\right)\right) & ; \mathrm{e} \in(\mathrm{~A} \cap \mathrm{~B}), \forall y_{i} \in U_{2}
\end{array}
$$

## Example 4．4：

Consider the example given in 4．2．
Intersection of VBSS＇s（ $\ddot{F}, \mathrm{~A}$ ）and（ $\ddot{G}, \mathrm{~B})$ is（ $\ddot{K}, \mathrm{D})$ can be represented as follows：

|  |  | $\mathrm{e}_{2}=$ expensive | $\mathrm{e}_{3}=$ attractive | $\mathrm{e}_{4}$ Small | $\mathrm{e}_{5}=$ long | $\mathrm{e}_{6=\text { colorful }}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{U}_{1}$ | $\mathrm{b}_{1}$ | 〈［0．4，0．6］〉 | 〈［0．1，0．3］＞ | 〈［0．3，0．4］〉 | 〈［0．2，0．9］〉 | 〈［0．5，0．6］＞ |
|  | $\mathrm{b}_{2}$ | 〈［0．2，0．5］〉 | 〈［0．4，0．5］〉 | 〈［0．2，0．3］〉 | 〈［0．2，0．4］〉 | $\langle[0.2,0.4]\rangle$ |
|  | $\mathrm{b}_{3}$ | 〈［0．4，0．7］〉 | 〈［0．6，0．7］〉 | 〈［0．2，0．7］〉 | ＜［0．2，0．5］＞ | $\langle[0.2,0.7]\rangle$ |
|  | $\mathrm{b}_{4}$ | 〈［0．2，0．9］〉 | 〈［0．2，0．6］〉 | 〈［0．4，0．8］〉 | ＜［0．2，0．6］〉 | $\langle[0.4,0.8]\rangle$ |
|  | $\mathrm{b}_{5}$ | 〈［0．2，0．3］〉 | 〈［0．3，0．5］〉 | 〈［0．5，0．8］〉 | 〈［0．5，0．7］〉 | $\langle[0.5,0.8]\rangle$ |
| $\mathrm{U}_{2}$ | $\mathrm{p}_{1}$ | 〈［0．2，0．4］〉 | 〈［0．2，0．8］＞ | 〈［0．2，0．7］＞ | ＜［0．6，0．7］＞ | ＜［0．2，0．7］＞ |
|  | $\mathrm{p}_{2}$ | 〈［0．1，0．3］〉 | 〈［0．2，0．9］〉 | 〈［0．3，0．5］＞ | 〈［0．7，0．8］〉 | $\langle[0.3,0.5]\rangle$ |
|  | $\mathrm{p}_{3}$ | 〈［0．2，0．6］〉 | 〈［0．2，0．7］〉 | 〈［0．4，0．5］〉 | 〈［0．1，0．9］〉 | 〈［0．4，0．5］＞ |

## Definition 4．5：

Let $(\ddot{F}, \mathrm{~A})$ and（ $\ddot{G}, \mathrm{~B})$ be two vague binary soft sets over a common universe $U_{1}, U_{2}$ with a fixed set E of parameters．AND operation between these sets is denoted as $(\ddot{F}, \mathrm{~A}) \ddot{\wedge}(\ddot{G}, \mathrm{~B})$ ．Let it be $(\ddot{M}, \mathrm{~A} \times \mathrm{B}) ; \ddot{M}: \mathrm{A} \times \mathrm{B} \rightarrow \mathrm{V}\left(U_{1}\right) \times \mathrm{V}\left(U_{2}\right)$ and $\left.\ddot{M} \mathrm{a}, \mathrm{b}\right)=\ddot{F}(\mathrm{a}) \cap \ddot{G}(\mathrm{~b}), \forall(\mathrm{a}, \mathrm{b}) \in \mathrm{C}=(\mathrm{A} \times \mathrm{B})$ ．
Here $\cap$ denotes the usual set theoretical operation
Example 4．6：
Let $U_{1}=\left\{b_{1}, b_{2}, b_{3}, b_{4}, b_{5}, b_{6}\right\}$ be the set of buses；$U_{2}=\left\{r_{1}, r_{2}, r_{3}\right\}$ be the set of routes； $\mathrm{E}=\left\{e_{1}=\right.$ rural，$e_{2}=$ urban，$e_{3}=$ inter－state，$e_{4}=$ air－bus，$e_{5}=$ luxury，$e_{6}=$ sleeper $\}$ be the set of parameters． $\mathrm{A}=\left\{e_{2}=\right.$ urban，$e_{4}=$ air－bus $\} ; \mathrm{B}=\left\{e_{3}=\right.$ inter－state $\} ; \mathrm{C}=\mathrm{A} \times \mathrm{B}=\left\{\left(e_{2}, e_{3}\right),\left(e_{4}\right.\right.$ ， $\left.\left.e_{3}\right)\right\}$ ．

Combined tabular representation of VBSS＇s $(\ddot{F}, \mathrm{~A})$ and $(\ddot{G}, \mathrm{~B})$ is given as follows：

| U |  | A |  | B |
| :---: | :---: | :--- | :---: | :--- |
|  |  | $e_{2}=$ <br> urban | $e_{4}=$ air－ <br> bus | $\mathrm{e}_{3=}$ inter－ <br> state |
| $\mathrm{U}_{1}$ | $\mathrm{~b}_{1}$ | $\langle[0.1,0.3]\rangle$ | $\langle[0.3,0.4]\rangle$ | $\langle[0.5,0.6]\rangle$ |
|  | $\mathrm{b}_{2}$ | $\langle[0.5,0.8]\rangle$ | $\langle[0.2,0.3]\rangle$ | $\langle[0.4,0.5]\rangle$ |
|  | $\mathrm{b}_{3}$ | $\langle[0.6,0.7]\rangle$ | $\langle[0.2,0.7]\rangle$ | $\langle[0.6,0.8]\rangle$ |
|  | $\mathrm{b}_{4}$ | $\langle[0.2,0.6]\rangle$ | $\langle[0.4,0.8]\rangle$ | $\langle[0.3,0.6]\rangle$ |
|  | $\mathrm{b}_{5}$ | $\langle[0.3,0.5]\rangle$ | $\langle[0.5,0.8]\rangle$ | $\langle[0.3,0.5]\rangle$ |
| $\mathrm{U}_{2}$ | $\mathrm{r}_{1}$ | $\langle[0.4,0.8]\rangle$ | $\langle[0.2,0.7]\rangle$ | $\langle[0.2,0.9]\rangle$ |
|  | $\mathrm{r}_{2}$ | $\langle[0.2,0.9]\rangle$ | $\langle[0.3,0.5]\rangle$ | $\langle[0.7,0.9]\rangle$ |
|  | $\mathrm{r}_{3}$ | $\langle[0.2,0.7]\rangle$ | $\langle[0.4,0.5]\rangle$ | $\langle[0.5,0.7]\rangle$ |

AND operation of $(\ddot{F}, \mathrm{~A})$ and $(\ddot{G}, \mathrm{~B})$ is $\operatorname{VBSS}(\ddot{M}, \mathrm{~A} \times \mathrm{B})$ is as follows：

| C $=A \times B$ <br> U |  | $\left(\mathrm{e}_{2}, \mathrm{e}_{3}\right)=($ urban，inter－ state） | $\left(e_{4}, e_{3}\right)=($ air－bus，inter－ state） |
| :---: | :---: | :---: | :---: |
| $\mathrm{U}_{1}$ | $\mathrm{b}_{1}$ | 〈［0．1，0．3］〉 | 〈［0．3，0．4］〉 |
|  | $\mathrm{b}_{2}$ | 〈［0．4，0．5］〉 | ＜［0．2，0．3］＞ |
|  | $\mathrm{b}_{3}$ | 〈［0．6，0．7］〉 | 〈［0．2，0．7］〉 |
|  | $\mathrm{b}_{4}$ | 〈［0．2，0．6］〉 | ＜［0．3，0．6］〉 |
|  | $\mathrm{b}_{5}$ | 〈［0．3，0．5］〉 | ＜［0．3，0．5］＞ |

## Example 4．8：

Consider example 4．6：OR operation of $(\ddot{F}, \mathrm{~A})$ and $(\ddot{G}, \mathrm{~B})$ is VBSS $(\ddot{N}, \mathrm{~A} \times \mathrm{B})$ is as follows：

|  |  | $\begin{aligned} & \left(\mathrm{e}_{2}, \mathrm{e}_{3}\right) \\ & =(\text { urban, inter- } \\ & \text { state }) \end{aligned}$ | $\begin{aligned} & \left(e_{4}, e_{3}\right) \\ & =(\text { air-bus, } \\ & \text { inter-state }) \end{aligned}$ |
| :---: | :---: | :---: | :---: |
| $\mathrm{U}_{1}$ | $\mathrm{b}_{1}$ | 〈［0．5，0．6］〉 | 〈［0．5，0．6］〉 |
|  | $\mathrm{b}_{2}$ | 〈［0．5，0．8］＞ | 〈［0．4，0．5］＞ |
|  | $\mathrm{b}_{3}$ | ＜［0．6，0．8］＞ | 〈［0．6，0．8］＞ |
|  | $\mathrm{b}_{4}$ | 〈［0．3，0．6］〉 | 〈［0．4，0．8］＞ |
|  | $\mathrm{b}_{5}$ | ＜［0．3，0．5］＞ | 〈［0．5，0．8］＞ |
| $\mathrm{U}_{2}$ | $\mathrm{r}_{1}$ | 〈［0．4，0．9］〉 | 〈［0．2，0．9］〉 |
|  | $\mathrm{r}_{2}$ | 〈［0．7，0．9］〉 | 〈［0．7，0．9］＞ |
|  | $\mathrm{r}_{3}$ | 〈［0．5，0．7］〉 | 〈［0．5，0．7］〉 |

## Definition 4．9：

A vague binary soft set $(\ddot{F}, \mathrm{~A})$ is contained in another vague binary soft set（ $\ddot{G}, \mathrm{~B})$ denoted as $(\ddot{F}, \mathrm{~A}) \cong(\ddot{G}, \mathrm{~B})$ if
（1）$A \subseteq B$
（2）$\forall \mathrm{e} \in \mathrm{A}, \ddot{F}(\mathrm{e})$ and $\ddot{G}(\mathrm{e})$ are identical approximations
In this case（ $\ddot{F}, \mathrm{~A})$ is called vague binary soft subset of $(\ddot{G}, \mathrm{~B})$ and（ $\ddot{G}, \mathrm{~B})$ is called vague binary soft superset of $(\dddot{F}, \mathrm{~A})$ where $\subseteq$ denotes the usual set theoretical operation

## Example 4．10：

Let $U_{1}=\left\{b_{1}, b_{2}, b_{3}\right\} ; U_{2}=\left\{p_{1}, p_{2}, p_{3}\right\} ; \mathrm{E}=\left\{e_{1}, e_{2}, e_{3}, e_{4}\right\}$ ；
$\mathrm{A}=\left\{e_{3}, e_{4}\right\} \subseteq \mathrm{E} \& \mathrm{~B}=\left\{e_{2}, e_{3}, \mathrm{e}_{4}\right\} \subseteq \mathrm{E}$ ．
Let $(\dddot{F}, \mathrm{~A}) \&(\ddot{G}, \mathrm{~B})$ be two VBSS＇s over common universe $U_{1}, U_{2}$ ．

$$
\begin{aligned}
(\ddot{F}, \mathrm{~A})= & \left\{\left(\mathrm{e}_{3},\left\langle\frac{[0.2,0.3]}{b_{1}}, \frac{[0.4,0.0]}{b_{2}}, \frac{[0.2,0.8]}{b_{3}}\right\rangle,\left\langle\frac{[0.5,0.0]}{p_{1}}, \frac{[0.2,0.0]}{p_{2}}, \frac{[0.8,0.9]}{p_{3}}\right\rangle\right),\right. \\
& \left.\left(e_{4},\left\langle\frac{[0.3,0.4]}{b_{1}}, \frac{[0.5,0.7]}{b_{2}}, \frac{[0.5,0.6]}{b_{3}}\right\rangle,\left\langle\frac{[0.7,0.8]}{p_{1}}, \frac{[0.4,0.7]}{p_{2}}, \frac{[0.2,0.8]}{p_{3}}\right\rangle\right)\right\} \\
(\ddot{G}, \mathrm{~B})= & \left\{\left(\mathrm{e}_{2},\left\langle\frac{[0.4,0.5]}{b_{1}}, \frac{[0.5,0.0]}{b_{2}}, \frac{[0.3,0.5]}{b_{3}}\right\rangle,\left\langle\frac{[0.6,0.6]}{p_{1}}, \frac{[0.3,0.0]}{p_{2}}, \frac{[0.7,0.8]}{p_{3}}\right\rangle\right),\right. \\
& \left(e_{3},\left\langle\frac{[0.2,0.3]}{b_{1}}, \frac{[0.4,0.0]}{b_{2}}, \frac{[0.2,0.8]}{b_{3}}\right\rangle,\left\langle\frac{[0.5,0.6]}{p_{1}}, \frac{[0.2,0.0]}{p_{2}}, \frac{[0.8,0.9]}{p_{3}}\right\rangle\right) \\
& \left.\left(e_{4},\left\langle\frac{[0.3,0.4]}{b_{1}}, \frac{[0.5,0.7]}{b_{2}}, \frac{[0.5,0.6]}{b_{3}}\right\rangle,\left\langle\frac{[0.7,0.8]}{p_{1}}, \frac{[0.4,0.7]}{p_{2}}, \frac{[0.2,0.8]}{p_{3}}\right\rangle\right)\right\}
\end{aligned}
$$

In this case $(\ddot{F}, \mathrm{~A}) \check{\asymp}(\ddot{G}, \mathrm{~B})$ i．e．，$(\ddot{F}, \mathrm{~A})$ is a vague binary soft subset of $(\ddot{G}, \mathrm{~B})$ ．

## $(\ddot{G}, \mathrm{~B}) \ddot{\sqsupseteq}(\ddot{F}, \mathrm{~A})$ i.e., $(\ddot{G}, \mathrm{~B})$ is a vague binary soft superset of $(\ddot{F}, \mathrm{~A})$

## Definition 4.11:

Let ( $\ddot{F}, \mathrm{~A}$ ) and ( $\ddot{F}, \mathrm{~B}$ ) are two VBSS's. These sets are said to be vague binary soft equal if ( $\ddot{F}$, A) is a vague binary soft subset of ( $\ddot{G}, \mathrm{~B})$ and ( $\ddot{G}, \mathrm{~B})$ is a vague binary soft superset of $(\ddot{F}, \mathrm{~A})$.

It is denoted by $(\ddot{F}, \mathrm{~A}) \ddot{=}(\ddot{G}, \mathrm{~B})$

## Definition 4.12:

Complement of a VBSS ( $\ddot{F}, \mathrm{~A})$ with respect to absolute $\operatorname{VBSS}(\ddot{U}, \mathrm{~A})$ is denoted by $(\ddot{F}, \mathrm{~A})^{\mathrm{c}}=\left(\ddot{F}^{\mathrm{c}}, \mathrm{A}\right)$ is a mapping given by $\ddot{F}^{c}: \mathrm{A} \rightarrow \mathrm{V}\left(U_{1}\right) \times \mathrm{V}\left(U_{2}\right)$ such that

$$
\begin{aligned}
& t_{\ddot{F}^{c}(\mathrm{e})}\left(\mathrm{x}_{\mathrm{i}}\right)=f_{\ddot{F}(\mathrm{e})}\left(x_{i}\right) \\
& t_{\ddot{F}^{c}(\mathrm{e})}\left(\mathrm{y}_{\mathrm{i}}\right)=f_{\ddot{F}(\mathrm{e})}\left(y_{i}\right) ; \forall \mathrm{e} \in \mathrm{~A}, \forall x_{i} \in U_{1} \\
& 1-f_{\ddot{F}^{c}(\mathrm{e})}\left(\mathrm{x}_{\mathrm{i}}\right)=1-t_{\ddot{F}(\mathrm{e})}\left(x_{i}\right) ; \forall \mathrm{y} \in \mathrm{~A}, \forall x_{i} \in U_{2} \in U_{1} \\
& 1-f_{\ddot{F}^{c}(\mathrm{e})}\left(\mathrm{y}_{\mathrm{i}}\right)=1-t_{\ddot{F}(\mathrm{e})}\left(y_{i}\right) ; \forall \mathrm{e} \in \mathrm{~A}, \forall y_{i} \in U_{2}
\end{aligned}
$$

## Example 4.13:

Let $U_{1}=\left\{b_{1}, b_{2}, b_{3}, b_{4}, b_{5}, b_{6}\right\}$ be the set of books; $U_{2}=\left\{p_{1}, p_{2}, p_{3}, p_{4}\right\}$ be the set of pencils; cheap, $e_{2}=$ expensive, $e_{3}=$ attractive, $e_{4}=$ small, $e_{5}=$ long, $e_{6}=$ colorful $\}$ be the set of parameters. The binary soft set $(\ddot{F}, \mathrm{~A})$ where $\mathrm{A}=\left\{e_{2}, e_{6}\right\}$ describes expensive \& colorful features of both books and pencils which a stationary shop proprietor is going to purchase from a wholesale dealer. ( $\ddot{F}, \mathrm{~A}$ ) is a VBSS over $U_{1}, U_{2}$ defined as follows.
$\ddot{F}\left(e_{2}\right)=\left\{\left(\frac{[0.2,0.3]}{b_{1}}, \frac{[0.4,0.0]}{b_{2}}, \frac{[0.2,0.8]}{b_{3}}, \frac{[0.5,0.8]}{b_{4}} \frac{[0.7,0.8]}{b_{5}}\right\rangle,\left\{\frac{[0.5,0.0]}{p_{1}}, \frac{[0.2,0.0]}{p_{2}}, \frac{[0.8,0.9]}{p_{3}}, \frac{[0.4,0.7]}{p_{4}}\right\rangle\right\}$
$\ddot{F}\left(e_{6}\right)=\left\{\left\langle\frac{[0.3,0.4]}{b_{1}}, \frac{[0.5,0.7]}{b_{2}}, \frac{[0.5,0.6]}{b_{3}}, \frac{[0.6,0.7]}{b_{4}} \frac{[0.8,0.9]}{b_{5}}\right\rangle,\left\langle\frac{[0.7,0.8]}{p_{1}}, \frac{[0.4,0.7]}{p_{2}}, \frac{[0.2,0.8]}{p_{3}}, \frac{[0.5,0.5]}{p_{4}}\right\rangle\right\}$
The complement of the above vague binary soft set is given by $(\dddot{F}, \mathrm{~A})^{\mathrm{c}}$ is given by

$$
\begin{aligned}
& \ddot{F}^{c}\left(e_{2}\right)=\left\{\left\langle\frac{[0.7,0.8]}{b_{1}}, \frac{[0.4,0.0]}{b_{2}}, \frac{[0.2,0.8]}{b_{3}}, \frac{[0.2,0.5]}{b_{4}} \frac{[0.2,0.3]}{b_{5}}\right\rangle,\left\langle\frac{[0.4,0.5]}{p_{1}}, \frac{[0.4,0.8]}{p_{2}}, \frac{[0.1,0.2]}{p_{3}}, \frac{[0.3,0.0]}{p_{4}}\right\rangle\right\} \\
& \ddot{F}^{c}\left(e_{6}\right)=\left\{\left\langle\frac{[0.6,0.7]}{b_{1}}, \frac{[0.3,0.5]}{b_{2}}, \frac{[0.4,0.5]}{b_{3}}, \frac{[0.3,0.4]}{b_{4}} \frac{[0.1,0.2]}{b_{5}}\right\rangle,\left\langle\frac{[0.2,0.3]}{p_{1}}, \frac{[0.3,0.0]}{p_{2}}, \frac{[0.2,0.8]}{p_{3}}, \frac{[0.5,0.5]}{p_{4}}\right\rangle\right\}
\end{aligned}
$$

## Definition 4.14:

Let $(\ddot{F}, \mathrm{~A})$ and ( $\ddot{G}, \mathrm{~B})$ be two VBSS's over $U_{1}, U_{2}$.
Cartesian product of $(\ddot{F}, \mathrm{~A})$ and $(\ddot{G}, \mathrm{~B})$ is denoted as $(\ddot{F}, \mathrm{~A}) \ddot{\times}(\ddot{G}, \mathrm{~B})$. Let it be ( $\ddot{H}, \mathrm{~A} \times \mathrm{B})$.
It is a mapping given by $\ddot{H}: \mathrm{A} \times \mathrm{B} \rightarrow \mathrm{V}\left(U_{1} \times U_{1}\right) \times \mathrm{V}\left(U_{2} \times U_{2}\right)$;
$\ddot{H}(\mathrm{a}, \mathrm{b})=\ddot{F}(\mathrm{a}) \times \ddot{G}(\mathrm{~b}) ; \forall(\mathrm{a}, \mathrm{b}) \in(\mathrm{A} \times \mathrm{B})$.

\end{aligned}
$$

## 5. Algebraic properties of vague binary soft set operations

Some of the algebraic properties for the vague binary soft set operations defined in the last section are discussed here.

## Proposition 5.1: (Identity laws)

For any vague binary soft set ( $\ddot{F}, \mathrm{~A})$ defined on the absolute vague binary soft set ( $\ddot{U}, \mathrm{E}$ )
(1) $(\dddot{F}, \mathrm{~A}) \cup(\ddot{\varnothing}, \mathrm{A})=(\ddot{F}, \mathrm{~A})$
$(2)(\ddot{F}, \mathrm{~A}) \cap(\ddot{U}, \mathrm{~A})=(\ddot{F}, \mathrm{~A})$

## Proof

(1) $\operatorname{Let}(\ddot{F}, \mathrm{~A})=\{\mathrm{e} \in \mathrm{A} /(\mathrm{e}, \ddot{F}(\mathrm{e}))\}$ where $\ddot{F}(\mathrm{e})=\left\{\left(\left\langle\frac{V_{\ddot{F}(\mathrm{e})}\left(x_{i}\right)}{x_{i}} \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{V_{\ddot{F}(\mathrm{e})}\left(y_{i}\right)}{y_{i}} ; \forall x_{i} \in\right.\right.\right.$ $\square 2$
$(\ddot{\emptyset}, \mathrm{A})=\{\mathrm{e} \in \mathrm{A} /(\mathrm{e}, \ddot{\emptyset}(\mathrm{e}))\}$ where $\ddot{\emptyset}(\mathrm{e})=\left\{\left(\left\langle\frac{[0,0]}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{[0,0]}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}$
$(\ddot{F}, \mathrm{~A}) \mathrm{U}(\ddot{\emptyset}, \mathrm{A})=\left\{\mathrm{e} \in \mathrm{A} /\left(\mathrm{e},\left\{\left(\left\langle\frac{\max \left(V_{\left.F_{(\mathrm{e})}\left(x_{i}\right),[0,0]\right)}\right.}{x_{i}}\right\rangle ; x_{i} \in U_{1}\right\rangle,\left\langle\frac{\max \left(V_{\left.F_{(\mathrm{e})}\left(y_{i}\right),[0,0]\right)}\right.}{y_{i}}\right\rangle ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}$

$$
=\left\{\mathrm{e} \in \mathrm{~A} /\left(\mathrm{e},\left\{\left(\left\langle\frac{V_{\ddot{F}(\mathrm{e})}\left(x_{i}\right)}{x_{i}}\right\rangle ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{V_{\ddot{F}(\mathrm{e})}(\mathrm{yi})}{y i}\right\rangle ; \forall \mathrm{y}_{i} \in U_{2}\right\rangle\right)\right\}=(\ddot{F}, \mathrm{~A})
$$

(2) Proof is similar to (1)

## Proposition 5.2:(Domination laws)

For any vague binary soft set ( $\ddot{F}$, A) defined on the absolute vague binary soft set ( $\ddot{U}, \mathrm{~A}$ )
(1) $(\ddot{F}, \mathrm{~A}) \cap(\ddot{\partial}, \mathrm{A})=(\ddot{\partial}, \mathrm{A})$
(2) $(\ddot{F}, \mathrm{~A}) \cup(\ddot{U}, \mathrm{~A})=(\ddot{U}, \mathrm{~A})$

## Proof

(1) $\operatorname{Let}(\ddot{F}, \mathrm{~A})=\{\mathrm{e} \in \mathrm{A} /(\mathrm{e}, \ddot{F}(\mathrm{e}))\}$ where $\ddot{F}(\mathrm{e})=\left\{\left(\left\langle\frac{V_{F(\mathrm{e})}\left(x_{i}\right)}{x i} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{V_{F_{(\mathrm{e})}\left(y_{i}\right)}}{y_{i}} ; \forall y_{i} \in\right.\right.\right.$ $\square 2$

$$
\begin{aligned}
(\ddot{\emptyset}, \mathrm{A})= & \left.\{\mathrm{e} \in \mathrm{~A} /(\mathrm{e}, \ddot{\emptyset}(\mathrm{e}))\}=\left\{\left(\left\langle\frac{[0,0]}{x_{i}}\right\rangle ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{[0,0]}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\} \\
(\ddot{F}, \mathrm{~A}) \cap(\ddot{\emptyset}, \mathrm{A}) & =\left\{\left(\left\langle\frac{\min \left(V_{F(\mathrm{e})}\left(x_{i}\right),[0,0]\right)}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{\min \left(V_{F(\mathrm{e})}\left(y_{i}\right),[0,0]\right)}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\} \\
& =\left\{\left(\left\langle\frac{[0,0]}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{[0,0]}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}=(\ddot{\emptyset}, \mathrm{A})
\end{aligned}
$$

(2) Proof is similar to (1)

## Proposition 5.3:(Idempotent laws)

For any vague binary soft set ( $\ddot{F}, \mathrm{~A})$ over the absolute vague binary soft set ( $\ddot{U}, \mathrm{~A}$ )
(1) $(\ddot{F}, \mathrm{~A}) \cap(\ddot{F}, \mathrm{~A})=(\ddot{F}, \mathrm{~A})$
(2) $(\dddot{F}, \mathrm{~A}) \cup(\dddot{F}, \mathrm{~A})=(\dddot{F}, \mathrm{~A})$

## Proof

(1) Let $(\ddot{F}, \mathrm{~A})=\{\mathrm{e} \in \mathrm{A} /(\mathrm{e}, \ddot{F}(\mathrm{e}))\}$ where $\ddot{F}(\mathrm{e})=\left\{\left(\left\langle\frac{V_{F_{(\mathrm{e}}\left(x_{i}\right)}}{x_{i}}\right\rangle ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{V_{F(\mathrm{e})}\left(y_{i}\right)}{y_{i}}\right\rangle ; \forall \mathrm{y}_{i} \in\right.$ $\square 2\rangle$

$$
\begin{aligned}
(\ddot{F}, \mathrm{~A}) \cap(\ddot{F}, \mathrm{~A}) & =\left\{\left(\left\langle\frac{\min \left(V_{\tilde{F}(\mathrm{e})}\left(x_{i}\right), V_{\tilde{F}(\mathrm{e})}\left(x_{i}\right)\right)}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{\min \left(V_{\ddot{F}(\mathrm{e})}\left(y_{i}\right), V_{\ddot{F}(\mathrm{e})}\left(y_{i}\right)\right)}{y_{i}} ; \forall \mathrm{y}_{i} \in U_{2}\right\rangle\right)\right\} \\
& =\left\{\left(\left\langle\frac{V_{\tilde{F}(\mathrm{e})}\left(x_{i}\right)}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{V_{\ddot{F}(\mathrm{e})}\left(y_{i}\right)}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}=(\ddot{F}, \mathrm{~A})
\end{aligned}
$$

(2) Proof is similar to (1)

## Proposition 5.4:(Complemental laws)

(1) $(\ddot{\partial}, \mathrm{A})^{\mathrm{c}}=(\ddot{U}, \mathrm{~A})$
(2) $(\ddot{U}, \mathrm{~A})^{\mathrm{c}}=(\ddot{\varnothing}, \mathrm{A})$

## Proof

(1) Let $(\ddot{\varnothing}, \mathrm{A})=(\ddot{F}, \mathrm{~A})$
$(\ddot{\emptyset}, \mathrm{A})=\left\{\mathrm{e} \in \mathrm{A} /\left(\mathrm{e},\left\{\left(\left\langle\frac{[0,0]}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{[0,0]}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}\right.\right.$
$(\ddot{F}, \mathrm{~A})=\left\{\mathrm{e} \in \mathrm{A} /\left(\mathrm{e},\left\{\left(\left\langle\frac{V_{\check{F}(\mathrm{e})}\left(x_{i}\right)}{x i} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{V_{\ddot{F}(\mathrm{e})}\left(y_{i}\right)}{y i} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}\right.\right.$
Then $\forall \mathrm{e} \in \mathrm{A}, \ddot{F}(\mathrm{e})=\left\{\left(\left\langle\frac{V_{\ddot{F}(\mathrm{e})}\left(x_{i}\right)}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{V_{\dot{F}(\mathrm{e})}\left(y_{i}\right)}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}$

$$
=\left\{\left(\left\langle\frac{[0,0]}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{[0,0]}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}
$$

$$
(\ddot{F}(\mathrm{e}))^{\mathrm{c}}=\left\{\left(\left\langle\frac{[0,0]}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{[0,0]}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}^{\mathrm{c}}
$$

$$
=\left\{\left(\left\langle\frac{[1,1]}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{[1,1]}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}=\ddot{U}(\mathrm{e}), \forall \mathrm{e} \in \mathrm{~A} \Rightarrow(\ddot{\emptyset}, \mathrm{~A})^{\mathrm{c}}=(\ddot{U}, \mathrm{~A})
$$

(2) Proof is similar to (1)

## Proposition 5.5:(Commutative laws)

For any vague binary soft set $(\ddot{F}, \mathrm{~A})$ and $(\ddot{G}, \mathrm{~B})$ over the absolute vague binary soft set $(\ddot{U}, \mathrm{E})$
(1) $(\ddot{F}, \mathrm{~A}) \cap(\ddot{G}, \mathrm{~B})=(\ddot{G}, \mathrm{~B}) \cap(\ddot{F}, \mathrm{~A})$
$(2)(\ddot{F}, \mathrm{~A}) \cup(\ddot{G}, \mathrm{~B})=(\ddot{G}, \mathrm{~B}) \cup(\ddot{F}, \mathrm{~A})$

## Proof

Proof is obvious

## Proposition 5.6:(Associative laws)

For any vague binary soft set $(\ddot{F}, \mathrm{~A}),(\ddot{G}, \mathrm{~B})$ and $(\ddot{H}, \mathrm{C})$ over absolute vague binary soft set ( $\ddot{U}, \mathrm{E})$
(1) $((\ddot{F}, \mathrm{~A}) \cap(\ddot{G}, \mathrm{~B})) \cap(\ddot{H}, \mathrm{C})=(\ddot{F}, \mathrm{~A}) \cap((\ddot{G}, \mathrm{~B}) \cap(\ddot{H}, \mathrm{C}))$
$(2)((\ddot{F}, \mathrm{~A}) \cup(\ddot{G}, \mathrm{~B})) \cup(\ddot{H}, \mathrm{C})=(\ddot{F}, \mathrm{~A}) \cup((\ddot{G}, \mathrm{~B}) \cup(\ddot{H}, \mathrm{C}))$

## Proof

Proof is obvious

## Proposition 5.7:(Distributive laws)

(1) $(\ddot{F}, \mathrm{~A}) \cap((\ddot{G}, \mathrm{~B})) \cup(\ddot{H}, \mathrm{C}))=((\ddot{F}, \mathrm{~A}) \cap(\ddot{G}, \mathrm{~B})) \cup((\ddot{F}, \mathrm{~A})) \cap(\ddot{H}, \mathrm{C}))$
(2) $(\ddot{F}, \mathrm{~A}) \cup((\ddot{G}, \mathrm{~B}))) \cap(\ddot{H}, \mathrm{C})))=((\ddot{F}, \mathrm{~A}) \cup(\ddot{G}, \mathrm{~B}))) \cap((\ddot{F}, \mathrm{~A}) \cup(\ddot{H}, \mathrm{C}))$

## Proof

## Proof is obvious

## Proposition 5.8:

Let $(\ddot{F}, \mathrm{~A})$ and $(\ddot{G}, \mathrm{~A})$ be two vague binary soft sets in $\operatorname{VBSS}\left(\mathrm{U}_{1}, \mathrm{U}_{2}\right)_{\mathrm{A}}$. Then following are true.
$(1)(\ddot{F}, \mathrm{~A}) \subseteq(\ddot{G}, \mathrm{~A}) \Leftrightarrow(\ddot{F}, \mathrm{~A}) \cap(\ddot{G}, \mathrm{~A})=(\ddot{F}, \mathrm{~A})$
$(2)(\ddot{F}, \mathrm{~A}) \subseteq(\ddot{G}, \mathrm{~A}) \Leftrightarrow(\ddot{F}, \mathrm{~A}) \cup(\ddot{G}, \mathrm{~A})=(\ddot{F}, \mathrm{~A})$

## Proof

$\operatorname{Let}(\ddot{F}, \mathrm{~A}) \subseteq(\ddot{G}, \mathrm{~A})$
Then $\ddot{F}(\mathrm{e}) \subseteq \ddot{G}(\mathrm{e}), \forall \mathrm{e} \in \mathrm{A}$
Let $(\ddot{H}, \mathrm{~A})=(\ddot{F}, \mathrm{~A}) \cap(\ddot{G}, \mathrm{~A})$
Since $\ddot{H}(\mathrm{e})=\ddot{F}(\mathrm{e}) \cap \ddot{G}(\mathrm{e}), \forall \mathrm{e} \in \mathrm{A} \Longrightarrow \ddot{H}(\mathrm{e})=\ddot{F}(\mathrm{e}), \forall \mathrm{e} \in \mathrm{A}$
By definition $(\ddot{H}, \mathrm{~A})=(\ddot{F}, \mathrm{~A})$
Again suppose that $(\ddot{F}, \mathrm{~A}) \cap(\ddot{G}, \mathrm{~A})=(\ddot{F}, \mathrm{~A})$
$\operatorname{Let}(\ddot{F}, \mathrm{~A}) \cap(\ddot{G}, \mathrm{~A})=(\ddot{H}, \mathrm{~A})$

Let $\left.(\ddot{F}, \mathrm{~A})^{\mathrm{c}} \cap \ddot{( } \ddot{G}, \mathrm{~B}\right)^{\mathrm{c}}=(\ddot{M}, \mathrm{~A})$
$\forall \mathrm{e} \in \mathrm{A}, \ddot{M}(\mathrm{e})=\ddot{F}(\mathrm{e})^{\mathrm{c}} \ddot{U} \ddot{G}(\mathrm{e})^{\mathrm{c}}$

$$
\begin{aligned}
= & \left\{\left(\left\langle\frac{\left[f_{F(\mathrm{e})}\left(x_{i}\right), 1-t_{F(\mathrm{e})}\left(x_{i}\right)\right]}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{\left[f_{F(\mathrm{e})}\left(y_{i}\right), 1-t_{F(\mathrm{e})}\left(y_{i}\right)\right]}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\} \ddot{n} \\
& \left\{\left(\left\langle\frac{\left[f_{\ddot{G}(\mathrm{e})}\left(x_{i}\right), 1-t_{\ddot{G}(\mathrm{e})}\left(x_{i}\right)\right]}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{\left[f_{\ddot{G}(\mathrm{e})}\left(y_{i}\right), 1-t_{\ddot{G}(\mathrm{e})}\left(y_{i}\right)\right]}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\} \\
= & \left\{\binom{\left\langle\frac{\min \left(\left(t_{\tilde{F}(\mathrm{e})}\left(x_{i}\right), t_{\ddot{G}(\mathrm{e})}\left(x_{i}\right)\right), \min \left(\left(1-f_{\ddot{F}(\mathrm{e})}\left(x_{i}\right), 1-f_{\ddot{G}(\mathrm{e})}\left(x_{i}\right)\right)\right.\right.}{x i} ; \forall x_{i} \in U_{1}\right\rangle,}{\left\langle\frac{\min \left(t_{\tilde{F(\mathrm{e})}}\left(y_{i}\right), t_{\ddot{G}(\mathrm{e})}\left(y_{i}\right)\right), \min \left(\left(1-f_{\tilde{F(\mathrm{e})}}\left(y_{i}\right), 1-f_{\ddot{G}(\mathrm{e})}\left(y_{i}\right)\right)\right.}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle}\right\}
\end{aligned}
$$

$$
\Rightarrow(\ddot{M}, \mathrm{~A})=(\ddot{F}, \mathrm{~A})^{\mathrm{c}} \ddot{\Pi}(\ddot{G}, \mathrm{~B})^{\mathrm{c}} \Rightarrow(\ddot{H}, \mathrm{~A})=(\ddot{M}, \mathrm{~A})
$$

(2) Proof is similar to (1)

## Proposition 5.11:(Idempotent property for AND \& OR operation)

For any vague binary soft set ( $\ddot{F}, \mathrm{~A})$ over the absolute vague binary soft set ( $\ddot{U}, \mathrm{E}$ )
(1) $(\ddot{F}, \mathrm{~A}) \ddot{\wedge}(\ddot{F}, \mathrm{~A})=(\ddot{F}, \mathrm{~A})$
(2) $(\ddot{F}, \mathrm{~A}) \ddot{\mathrm{V}}(\dddot{F}, \mathrm{~A})=(\ddot{F}, \mathrm{~A})$

## Proof

$(\ddot{F}, \mathrm{~A}) \ddot{\wedge}(\ddot{F}, \mathrm{~A})=(\ddot{M}, \mathrm{C})$ where $\mathrm{C}=\mathrm{A} \times \mathrm{A}, \forall(\mathrm{a}, \mathrm{a}) \in \mathrm{C}=(\mathrm{A} \times \mathrm{A})$,
$\ddot{M} \mathrm{a}, \mathrm{a})=\ddot{F}(\mathrm{a}) \ddot{\cap} \dddot{F}(\mathrm{a})=\ddot{F}(\mathrm{a}) \Longrightarrow(\ddot{M}, \mathrm{C})=(\dddot{F}, \mathrm{~A}) \Rightarrow \ddot{F}, \mathrm{~A}) \ddot{\wedge}(\ddot{F}, \mathrm{~A})=(\dddot{F}, \mathrm{~A})$
(2) Proof is similar to (1)

## Proposition 5.12:

(1) $(\ddot{F}, \mathrm{~A}) \ddot{U}(\ddot{\partial}, \mathrm{~B})=(\ddot{F}, \mathrm{~A}) \Leftarrow B \subseteq \mathrm{~A}$
(2) $(\ddot{F}, \mathrm{~A}) \ddot{U}(\ddot{U}, \mathrm{~B})=(\ddot{U}, \mathrm{~A}) \Leftrightarrow \mathrm{A} \subseteq \mathrm{B}$

Proof
$(\dddot{F}, \mathrm{~A})=\{\mathrm{e} \in \mathrm{A} /(\mathrm{e}, \ddot{F}(\mathrm{e}))\}$ where $\ddot{F}(\mathrm{e})=\left\{\left(\left\langle\frac{V_{F_{F(\mathrm{e})}}\left(x_{i}\right)}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{V_{F_{(\mathrm{e})}\left(y_{i}\right)}}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}$
Also let $(\ddot{\emptyset}, \mathrm{B})=(\ddot{G}, \mathrm{~B})$
$\forall \mathrm{e} \in \mathrm{B}, \ddot{G}(\mathrm{e})=\left\{\left(\left\langle\frac{[0,0]}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{[0,0]}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\}$
$\operatorname{Let}(\ddot{F}, \mathrm{~A}) \ddot{U}(\ddot{G}, \mathrm{~B})=(\ddot{N}, \mathrm{C})$ where $\mathrm{C}=\mathrm{AUB}$
$\forall \mathrm{e} \in \mathrm{C}, \ddot{N}(\mathrm{e})=\ddot{F}(\mathrm{e}) \quad ; \mathrm{e} \in(\mathrm{A}-\mathrm{B})$

Let $\mathrm{B} \subseteq \mathrm{A}$,

$$
\ddot{N}(\mathrm{e})=\left\{\left(\left\langle\frac{V_{\tilde{F}(\mathrm{e})}\left(x_{i}\right)}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{V_{\tilde{F}(\mathrm{e})}\left(y_{i}\right)}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\} ; \mathrm{e} \in(\mathrm{~A}-\mathrm{B})
$$

$$
\left\{\left(\left\langle\frac{V_{\tilde{F}(\mathrm{e})}\left(x_{i}\right)}{x_{i}} ; \forall x_{i} \in U_{1}\right\rangle,\left\langle\frac{V_{\tilde{F}(\mathrm{e})}\left(y_{i}\right)}{y_{i}} ; \forall y_{i} \in U_{2}\right\rangle\right)\right\} ; \mathrm{e} \in(\mathrm{~A} \cap \mathrm{~B})
$$

$=\ddot{F}(\mathrm{e}), \forall \mathrm{e} \in \mathrm{A}$
Conversely $(\ddot{F}, \mathrm{~A}) \ddot{U}(\ddot{\partial}, \mathrm{~B})=(\ddot{F}, \mathrm{~A}) \Longrightarrow \mathrm{AUB}=\mathrm{A} \Longrightarrow \mathrm{B} \subseteq \mathrm{A}$
(2) Proof is similar to (1)

## 7. Conclusion

Vague binary soft sets are introduced with two initial universes. It is hoped that this hybrid form can extract positive qualities of both vague and soft sets and would be more useful while handling real life situations with uncertainties and vagueness.
