#### Abstract

Zagreb indices are the parameters defined using sum and product of degrees of vertices, joining an edge, in a graph The roots of this concept come from Chemical graph theory, in recent years lot of work is published on Zagreb indices of standard graphs and graph operations. In this paper we establish the relation for Zagreb indices of book graph and Stacked book graph with its component graphs and also find their corresponding polynomials.

KEYWORDS: Zagreb Indices, Hyper Zagreb Indices, Book Graph, Stacked Book Graph
Classification number: 05C07, 05C35, 05C76

### 1.1 INTRODUCTION

The concepts of connectivity in Chemical Graph Theory, which define relationships between the structure of a molecule and its properties. One important parameter, topological index, which characterizes molecular graph and remain invariant under graph automorphism are called Zagreb Indices. These parameters introduced by Gutman I [5] are defined by using sum and product of degrees of vertices joining an edge.

Consider a subset of $E(G)$ denoted as $E_{a, b}=\{(u, v) \in E(G) / d(u)=a$ and $d(v)=b\}$. Partitioning the edge set $E(G)$ into disjoint sets $E_{a, b}$ with all possible choices of pairs $a, b$ we can determine the Zagreb and hyper Zagreb indices and their corresponding polynomials for first and second kind. The Zagreb indices, hyper Zagreb indices and their corresponding polynomialswe use definitions given by Gutman [5] stated as follows:

$$
\begin{array}{cc}
M_{1}(G)=\sum_{\mathrm{E}_{\mathrm{uv} \in \mathrm{E}(\mathrm{G})}}\left[\mathrm{d}_{\mathrm{G}}(\mathrm{u})+\mathrm{d}_{\mathrm{G}}(\mathrm{v})\right] & M_{2}(G)=\sum_{u v \in V(G)}\left[d_{G}(u) d_{G}(v)\right] \\
H M_{1}(G)=\sum_{u v \in E}\left[d_{G}(u)+d_{G}(v]^{2}\right. & H M_{2}(G)=\sum_{u v \in E}\left[d_{G}(u) d_{G}(v)\right]^{2}
\end{array}
$$

$$
\begin{array}{cc}
\mathrm{M}_{1}(\mathrm{G}, x)=\sum_{u v \in E(G)} x^{\left[d_{G}(u)+d_{G}(v)\right]} & M_{2}(G, x)=\sum_{u v \in E(G)} x^{\left[d_{G}(u) d_{G}(v)\right]} \\
H M_{1}(G, x)=\sum_{u v \in E} x^{\left[d_{G}(u)+d_{G}(v)\right]^{2}} & H M_{2}(G, \mathrm{x})=\sum_{u v \in \mathrm{E}} \mathrm{x}^{\left[\mathrm{d}_{G}(\mathrm{u}) \mathrm{d}_{G}(\mathrm{v})\right]^{2}}
\end{array}
$$

In this paper we present results for Zagreb indices, hyper Zagreb indices and their polynomials for product graphs $B_{m}, B_{m, n}$ For simplicity of notation we write $d_{G}(u)=$ a and $\mathrm{d}_{\mathrm{G}}(\mathrm{v})=\mathrm{b}$, in all further proofs.

## 2 ZAGREB INDICES FOR $B_{m}$

Book graph $B_{m}$ is the cross product of star $S_{m+1}$ and path $P_{2}$. For $m \geq 3$, we have $\left|V\left(B_{m}\right)\right|=2 m+2,\left|E\left(B_{m}\right)\right|=3 m+1 . B_{m}$ is a biregular graph with two possible vertex degrees 2 and $m+1$. We can partition $V\left(B_{m}\right)$ in to two disjoint subsets $V_{2}$ and $V_{m+1}$ as follows.
$V_{2}=\left\{v \in V\left(B_{m}\right) / d(v)=2\right\}$ with $\left|V_{2}\right|=2 m$
$V_{m+1}=\left\{v \in V\left(B_{m}\right) / d(v)=m+1\right\}$ with $\left|V_{m+1}\right|=2$
Next, the edge set $E\left(B_{m}\right)$ can be partitioned into three disjoint subsets based on the condition that incident vertices belong to $V_{2}$ and $V_{m+1}$ as follows.
$E_{2,2}=\left\{u v \in E\left(B_{m}\right) ; u, v \in V_{2}\right\}$ with $\left|E_{2,2}\right|=m$
$E_{2, m+1}=\left\{u v \in E\left(B_{m}\right) ; u \in V_{2}, v \in V_{m+1}\right\}$ with $\left|E_{2, m+1}\right|=2 m$
$E_{m+1, m+1}=\left\{u v \in E\left(B_{m}\right) ; u, v \in V_{m+1}\right\}$ with $\left|E_{m+1, m+1}\right|=1$
Theorem2.1: The first Zagreb indices and their polynomial for $B_{m}$ are

$$
\begin{gathered}
M_{1}\left(B_{m}\right)=2\left[(m+3)^{2}-8\right] \quad \text { where } m \geq 3 \\
M_{1}\left(B_{m}, x\right)=m x^{4}+2 m x^{m+3}+x^{2 m+2} \quad \text { where } m \geq 3
\end{gathered}
$$

Proof: The first Zagreb indices of $B_{m}$ are

$$
\begin{gathered}
M_{1}\left(B_{m}\right)=\sum_{\mathrm{E}_{\mathrm{uv} \in \mathrm{E}(\mathrm{G})}}[a+b]=\sum_{\mathrm{E}_{2,2}}[a+b]+\sum_{\mathrm{E}_{\mathrm{m}+1,2}}[a+b]+\sum_{\mathrm{E}_{\mathrm{m}+1, \mathrm{~m}+1}}[a+b] \\
=\left|E_{2,2}\right|[2+2]+\left|E_{2, m+1}\right|[m+1+2]+\left|E_{m+1, m+1}\right|[m+1+m+1] \\
=2 m^{2}+12 m+2=2\left[(m+3)^{2}-8\right]
\end{gathered}
$$

The first Zagreb polynomial of $B_{m}$ is

## International Journal of Engineering, Science and Mathematics

$$
\begin{aligned}
\mathrm{M}_{1}\left(\mathrm{~B}_{\mathrm{m}}, x\right)= & \sum_{u v \in E(G)} x^{a+b}=\sum_{E_{2,2}} x^{a+b}+\sum_{\boldsymbol{E}_{\boldsymbol{m}+\mathbf{1}, 2}} x^{a+b}+\sum_{\boldsymbol{E}_{\boldsymbol{m}+\mathbf{1}, \boldsymbol{m}+\boldsymbol{1}}} x^{a+b} \\
& =\left|E_{2,2}\right| x^{[2+2]}+\left|E_{2, m+1}\right| x^{[m+1+2]}+\left|E_{m+1, m+1}\right| x^{[m+1+m+1]} \\
& =m x^{4}+2 m x^{m+3}+x^{2 m+2}
\end{aligned}
$$

Theorem 2.2: The second Zagreb indices and their polynomial for $B_{m}$ are

$$
\begin{gathered}
M_{2}\left(B_{m}\right)=5(m+1)^{2}-4 \text { wherem } \geq 3 \\
M_{2}\left(B_{m}, x\right)=m x^{4}+2 m x^{2(m+1)}+x^{(m+1)^{2}} \text { wherem } \geq 3
\end{gathered}
$$

Proof: The second Zagreb indices for $B_{m}$ is,

$$
\begin{aligned}
& M_{2}\left(B_{m}\right)= \sum_{u v \in V(G)}[a . b]=\sum_{E_{2,2}}[a . b]+\sum_{E_{m+1,2}}[a . b]+\sum_{E_{m+1, m+1}} \quad[a . b] \\
&=\left|E_{2,2}\right|[2 \times 2]+\left|E_{2, m+1}\right|[(m+1) \times 2]+\left|E_{m+1, m+1}\right|\left[(m+1)^{2}\right. \\
&=4 m+4 m^{2}+4 m+m^{2}+2 m+1=5 m^{2}+10 m+1=5(m+1)^{2}-4
\end{aligned}
$$

Next second Zagreb polynomial for $B_{m}$ is

$$
\begin{aligned}
M_{2}\left(B_{m}, x\right) & =\sum_{u v \in E(G)} x^{[a . b]}=\sum_{E_{2,2}} x^{[a . b]}+\sum_{E_{m+1,2}} x^{[a . b]}+\sum_{E_{m+1, m+1}} x^{[a . b]} \\
& =m x^{[2 \times 2]}+2 m x^{[(m+1) \times 2]}+x^{[(m+1) \times(m+1)]} \\
& =m x^{4}+2 m x^{2(m+1)}+x^{(m+1)^{2}}
\end{aligned}
$$

Theorem 2.3: The first hyper-Zagreb indices and their polynomial of $B_{m}$ are

$$
\begin{gathered}
H M_{1}\left(B_{m}\right)=2 m\left[(m+4)^{2}+5\right]+4 \text { where } m \geq 3 \\
H M_{1}\left(B_{m}, x\right)=m x^{16}+2 m x^{[m+3]^{2}}+x^{[2(m+1)]^{2}}
\end{gathered}
$$

Proof: First hyper Zagreb indices for $B_{m}$ is

$$
\begin{aligned}
& H M_{1}\left(B_{m}\right)=\sum_{u v \in E}[a+b]^{2}=\sum_{E_{2,2}}[a+b]^{2}+\sum_{E_{m+1,2}}[a+b]^{2}+\sum_{E_{m+1, m+1}}[a+b]^{2} \\
& \quad=m[2+2]^{2}+2 m[m+1+2]^{2}+1[m+1+m+1]^{2} \\
& \quad=2 m^{3}+16 m^{2}+42 m+4 H M_{1}\left(B_{m}\right) \\
& \quad=2 m\left[(m+4)^{2}+5\right]+4
\end{aligned}
$$

Now the first hyper-Zagreb-polynomial for $B_{m}$ is

$$
\begin{aligned}
H M_{1}\left(B_{m}, x\right)= & \sum_{u v \in E} x^{[a+b]^{2}}=\sum_{E_{2,2}} x^{[a+b]^{2}}+\sum_{E_{2, m+1}} x^{[a+b]^{2}}+\sum_{E_{m+1, m+1}} x^{[a+b]^{2}} \\
& =m x^{[2+2]^{2}}+2 m x^{[m+1+2]^{2}}+x^{[m+1+m+1]^{2}}
\end{aligned}
$$

$$
H M_{1}\left(B_{m}, x\right)=m x^{16}+2 m x^{[m+3]^{2}}+x^{[2(m+1)]^{2}}
$$

Theorem 2.4:The second hyper-Zagreb indices and polynomial of $B_{m}$ for $m \geq 3$ is

$$
\begin{gathered}
H M_{2}\left(B_{m}\right)=\left[(m+1)^{2}+4 m\right]^{2}-16 m(m-1) \\
H M_{2}\left(B_{m}, x\right)=m x^{16}+2 m x^{(2(m+1))^{2}}+x^{(m+1)^{4}}
\end{gathered}
$$

Proof: The second hyper Zagreb indices of $B_{m}$ for $m \geq 3$ is

$$
\begin{aligned}
H M_{2}\left(B_{m}\right) & =\sum_{u v \in E}[a . b]^{2}=\sum_{E_{2,2}}[a . b]^{2}+\sum_{E_{2, m+1}}[a . b]^{2}+\sum_{E_{m}+1, m+1}[a . b]^{2} \\
& =m[2 \times 2]^{2}+2 m[(m+1) \times 2]^{2}+[(m+1) \times(m+1)]^{2} \\
& =m^{4}+12 m^{3}+22 m^{2}+28 m+1 \\
H M_{2}\left(B_{m}\right) & =\left[(m+1)^{2}+4 m\right]^{2}-16 m(m-1)
\end{aligned}
$$

Now, second hyper-Zagreb polynomial of $B_{m}$ for $m \geq 3$ is

$$
\begin{aligned}
H \mathrm{M}_{2}\left(\mathrm{~B}_{\mathrm{m}}, \mathrm{x}\right) & =\sum_{\mathrm{uv} \in \mathrm{E}} \mathrm{X}^{[a . b]^{2}}=\sum_{\mathrm{E}_{2,2}} \mathrm{X}^{[a . b]^{2}}+\sum_{\mathrm{E}_{\mathrm{m}}+1,2} \mathrm{X}^{[a . b]^{2}}+\sum_{\mathrm{E}_{\mathrm{m}+1, \mathrm{~m}+1}} \mathrm{X}^{[a . b]^{2}} \\
& =m x^{[2 \times 2]^{2}}+2 m x^{[(m+1) \times 2]^{2}}+x^{[(m+1) \times(m+1)]^{2}} \\
& =m x^{16}+2 m x^{(2(m+1))^{2}}+x^{(m+1)^{4}} \square
\end{aligned}
$$

## 3 Zagreb indices for $\boldsymbol{B}_{\boldsymbol{m}, \boldsymbol{n}}$

The graph $B_{m, n}$ is the cross product of $S_{m+1}$ and path $P_{n}$ form $\geq 3$ and $n \geq 2$, with the number of vertices $\left|V\left(B_{m, n}\right)\right|=m n+$ nand edges $\left|E\left(B_{m, n}\right)\right|=2 \mathrm{mn}-\mathrm{m}+\mathrm{n}-1$. We can partition $V\left(B_{m, n}\right)$ in to four disjoint subsets $V_{2}, V_{3}, V_{m+1}$ and $V_{m+2}$ as
$V_{2}=\left\{v \in V\left(B_{m, n}\right) ; d(v)=2\right\} ;\left|V_{2}\right|=2 m$

## International Journal of Engineering, Science and Mathematics

Vol. 9 Issue 6, June 2020,
ISSN: 2320-0294 Impact Factor: 6.765
Journal Homepage: http://www.ijesm.co.in, Email: ijesmj@gmail.com
Double-Blind Peer Reviewed Refereed Open Access International Journal - Included in the International Serial Directories Indexed \& Listed at: Ulrich's Periodicals Directory ©, U.S.A., Open J-Gage as well as in Cabell's Directories of Publishing Opportunities, U.S.A
$V_{3}=\left\{v \in V\left(B_{m, n}\right) ; d(v)=3\right\} ;\left|V_{3}\right|=m(n-2)$
$V_{m+1}=\left\{v \in V\left(B_{m, n}\right) ; d(v)=m+1\right\} ;\left|V_{m+1}\right|=2$
$V_{m+2}=\left\{v \in V\left(B_{m, n}\right) ; d(v)=m+2\right\} ;\left|V_{m+2}\right|=n-2$
Next, the edge set $E\left(B_{m, n}\right)$ can be partitioned into six disjoint subsets based on the degree of incident vertices as follows:
$E_{2,3}=\left\{u v \in E\left(B_{m}\right) ; u \in V_{2}, v \in V_{3}\right\} ;\left|E_{2,3}\right|=2 m$
$E_{2, m+1}=\left\{u v \in E\left(B_{m}\right) ; u \in V_{2}, v \in V_{m+1}\right\} ;\left|E_{2, m+1}\right|=2 m$
$E_{m+1, m+2}=\left\{u v \in E\left(B_{m}\right) ; u \in V_{m+1}, \quad v \in V_{m+2}\right\} ;\left|E_{m+1, m+2}\right|=2$
$E_{3, m+2}=\left\{u v \in E\left(B_{m}\right) ; u \in V_{3}, v \in V_{m+2}\right\} ;\left|E_{3, m+2}\right|=m(n-2)$
$E_{3,3}=\left\{u v \in E\left(B_{m}\right) ; u \in V_{3}, v \in V_{3}\right\} ;\left|E_{3,3}\right|=m(n-3)$
$E_{m+2, m+2}=\left\{u v \in E\left(B_{m}\right) ; u \in V_{m+2}, \quad v \in V_{m+2}\right\} ;\left|E_{m+2, m+2}\right|=n-3$
We observe that when $n=3,\left|E_{3,3}\right|=0$ and $\left|E_{m+2, m+2}\right|=0$

Theorem 3.1: The first Zagreb indices and their polynomial of $B_{m, n}$ for $m \geq 3 \& n \geq 3$ are,

$$
\begin{gathered}
M_{1}\left(B_{m, n}\right)=\left\{\begin{array}{c}
m(m n+13 n-14)+2(2 n-3) \text { ifm } \geq 3 \text { and } n>3 \\
m^{2} n+5 m(n+2)+6 \quad \text { if } m \geq 3 \text { and } n=3
\end{array}\right. \\
M_{1}\left(B_{m, n}, x\right)=\left\{\begin{array}{l}
\begin{array}{c}
(m n-2 m) x^{[m+5]}+(n-3) x^{2 m+4}+2 m x^{m+3}+2 x^{2 m+3}+ \\
(n-3) m x^{6}+2 m x^{5} \\
(m n-2 m) x^{[m+5]}+2 m x^{m+3}+2 x^{2 m+3}+2 m x^{5}
\end{array} \quad \text { if } n=3
\end{array}\right.
\end{gathered}
$$

Proof: The first Zagreb indices of $B_{m, n}$ is

$$
\begin{aligned}
\boldsymbol{M}_{\mathbf{1}}\left(\boldsymbol{B}_{\boldsymbol{m}, \boldsymbol{n}}\right)= & \sum_{\boldsymbol{u} \boldsymbol{v} \in \boldsymbol{E}(\boldsymbol{G})}[\boldsymbol{a}+\boldsymbol{b}] \\
= & \sum_{E_{2,3}}[\boldsymbol{a}+\boldsymbol{b}]+\sum_{E_{2, m+1}}[\boldsymbol{a}+\boldsymbol{b}]+\sum_{\boldsymbol{E}_{\boldsymbol{m}+1, m+2}}[\boldsymbol{a}+\boldsymbol{b}]+\sum_{\boldsymbol{E}_{3, m+2}}[\boldsymbol{a}+\boldsymbol{b}] \\
& +\sum_{E_{3,3}}[\boldsymbol{a}+\boldsymbol{b}]+\sum_{\boldsymbol{E}_{\boldsymbol{m}+2, \boldsymbol{m}+2}}[\boldsymbol{a}+\boldsymbol{b}] \\
= & 2 m[2+3]+2 m[2+m+1]+2[m+1+m+2]+(m n-2 m) \\
& {[3+\boldsymbol{m}+2]+(\boldsymbol{n}-3) \boldsymbol{m}[\mathbf{3}+\mathbf{3}]+(\boldsymbol{n}-\mathbf{3})[\boldsymbol{m}+\mathbf{2}+\boldsymbol{m}+\mathbf{2}] }
\end{aligned}
$$

Case (i) if $n>3$

$$
M_{1}\left(B_{m, n}\right)=m(m n+13 n-14)+2(2 n-3)
$$

Case (ii) when $\mathbf{n}=\mathbf{3}$ in equation (1), terms $(\mathbf{n}-\mathbf{3}) \mathbf{6 m a n d}(n-3)[\mathbf{2 m}+\mathbf{4}]$ are equal to zero as $\mathbf{E}_{\mathbf{3}, \mathbf{3}}$ and $\mathbf{E}_{\mathbf{m}+\mathbf{2}, \mathbf{m}+\mathbf{2}}$ has no edges giving,

$$
M_{1}\left(B_{m, n}\right)=m^{2} n+5 m(n+2)+6
$$

Now, the first Zagreb polynomial of $B_{m, n}$ is

$$
\begin{aligned}
& \mathrm{M}_{1}\left(\mathrm{~B}_{\mathrm{m}, \mathrm{n}}, \mathrm{x}\right)=\sum_{\mathrm{uv} \in \mathrm{E}(\mathrm{G})} \mathrm{X}^{[a+b]} \\
& =\sum_{\mathrm{E}_{2,3}} \mathrm{x}^{[a+b]}+\sum_{\mathrm{E}_{2, \mathrm{~m}+1}} \mathrm{x}^{[\mathrm{a}+\mathrm{b}]}+\sum_{\mathrm{E}_{\mathrm{m}+1, \mathrm{~m}+2}} \mathrm{x}^{[a+b]}+\sum_{\mathrm{E}_{3, \mathrm{~m}+2}} \mathrm{x}^{[\mathrm{a}+\mathrm{b}]}+\sum_{\mathrm{E}_{3,3}} \mathrm{X}^{[a+b]}+\sum_{\mathrm{E}_{\mathrm{m}+2, \mathrm{~m}+2}} \mathrm{X}^{[a+\mathrm{b}]} \\
& =2 \mathrm{mx}^{[2+3]}+2 \mathrm{mx}^{[2+\mathrm{m}+1]}+ \\
& 2 \mathrm{x}^{[\mathrm{m}+1+\mathrm{m}+2]}+(\mathrm{mn}-2 \mathrm{~m}) \mathrm{x}^{[3+\mathrm{m}+2]}+(\mathrm{n}-3) \mathrm{mx}^{[3+3]} \\
& \\
& \quad+(\mathrm{n}-3) \mathrm{x}^{[\mathrm{m}+2+\mathrm{m}+2]}
\end{aligned}
$$

Case (i) $n>3$
$M_{1}\left(B_{m, n}, x\right)=(m n-2 m) x^{[m+5]}+(n-3) x^{2 m+4}+2 m x^{m+3}+2 x^{2 m+3}+(n-3) m x^{6}+2 m x^{5}$

$$
M_{2}\left(B_{m, n}\right)=m(4 m n+19 n-3 m-29)+4(n-2)
$$

Case (ii) $\boldsymbol{n}=\mathbf{3}$

Putting $n=3$ in equation $(3),(n-3) 6 m$ and $(n-3)[2 m+4]$ become zero giving.

$$
M_{2}\left(B_{m, n}\right)=(m+2)[3 m n+2]+2(5 m+2)
$$

Next second Zagreb polynomial for stacked book graph $B_{m, n}$ is,

$$
\begin{aligned}
M_{2}\left(B_{m, n}, x\right)= & \sum_{u v \in E(G)} x^{[a . b]}=\sum_{E_{2,3}} x^{[a . b]}+\sum_{E_{2, m+1}} x^{[a . b]}+\sum_{E_{m+1, m+2}} x^{[a . b]} \\
& +\sum_{E_{3, m+2}} x^{[a . b]}+\sum_{E_{3,3}} x^{[a . b]}+\sum_{E_{m+2, m+2}} x^{[a . b]} \\
& =2 m x^{[2 \times 3]}+2 m x^{[2 \times(m+1)]}+2 x^{[(m+1) \times(m+2)]}+(m n-2 m) x^{[3 \times(m+2])} \\
& +(n-3) m x^{[3 \times 3]}+(n-3) x^{[(m+2) \times(m+2)]}
\end{aligned}
$$

Case 1: $n>3$

$$
\begin{aligned}
M_{2}\left(B_{m, n}, x\right) & =(n-3) x^{(m+2)^{2}}+(m n-2 m) x^{[3 m+6]}+2 m x^{2(m+1)} \\
& +2 x^{\left(m^{2}+3 m+2\right)}+2 m x^{6}+(n-3) m x^{9}
\end{aligned}
$$

Case (ii) when $n=3$ in above equation, $(n-3) m x^{9}$ and $(n-3) x^{(m+2)^{2}}$ becomes Zero, as $E_{3,3}$ and $E_{m+2, m+2}$ has no edges, giving

$$
M_{2}\left(B_{m, n}, x\right)=(m n-2 m) x^{[3 m+6]}+2 m x^{2(m+1)}+2 x^{\left(m^{2}+3 m+2\right)}+2 m x^{6} \boldsymbol{\square}
$$

$$

## 4 Results :

In the paper of Cangul et al [8] have given values for $\mathrm{M}_{1}, \mathrm{M}_{2}$ and we found the results for hyper Zagreb indices for star and path graph as given below :

| Sl.no | Zagreab | $\mathbf{S}_{\mathbf{m}+\mathbf{1}}$ | $\mathbf{P}_{\mathbf{n}}$ |
| :---: | :---: | :---: | :---: |
| 1 | $\mathrm{M}_{1}$ | $\mathrm{~m}^{2}+\mathrm{m}$ | $4 \mathrm{n}-6$ |
| 2 | $\mathrm{M}_{2}$ | $\mathrm{~m}^{2}$ | $4 \mathrm{n}-8$ |
| 3 | $\mathrm{HM}_{1}$ | $\mathrm{~m}(\mathrm{~m}+1)^{2}$ | $8(2 \mathrm{n}-3)$ |
| 4 | $\mathrm{HM}_{2}$ | $\mathrm{~m}^{3}$ | $16 \mathrm{n}-30$ |

Expressing the results for product graphs in terms of their component graph parameters we observe that

1. ifm $\geq \mathbf{3}$ and $n>3$

$$
\begin{gathered}
M_{1}\left(B_{m, n}\right)=m(m n+13 n-14)+2(2 n-3) \\
=n\left(m^{2}+m\right)+(3 m+1)(4 n-6)+4 \\
=n_{1} M_{1}\left(S_{m+1}\right)+(3 m+1) M_{1}\left(P_{n}\right)+4 m \\
H M_{2}\left(B_{m, n}\right)=m n\left(m^{3}+9 m^{2}-12 m+168\right)-m\left(m^{3}-2 m^{2}-42 m+255\right)+ \\
+8(2 n-5) \\
=m^{3}[m n+9 n-m+2]+(10 m+1)(16 n-30)+8 n+35 \\
=[m n+9 n-m+2] \mathbf{H M}_{2}\left(S_{m+1}\right)+(10 m+1) H M_{2}\left(P_{n}\right)+8 n+35
\end{gathered}
$$

2. if $m \geq 3$ and $n=3$

$$
\begin{aligned}
& M_{1}\left(B_{m, n}\right)=m^{2} n+5 m(n+2)+6=n\left(m^{2}+m\right)+m(4 n-6)+16 m+6 \\
& =n M_{1}\left(S_{m+1}\right)+(m+1) M_{1}\left(P_{n}\right)+\mathbf{1 6 m} \\
& M_{2}\left(B_{m, n}\right)=(m+2)[3 m n+2]+2(5 m+2) \\
& =3 n m^{2}+\frac{3 m}{2}(4 n-8)+8(3 m+1) \\
& =3 n M_{2}\left(S_{m+1}\right)+\frac{3 m}{2} M_{2}\left(P_{n}\right)+8(3 m+1) \\
& H M_{1}\left(B_{m, n}\right)=m\left[(m+5)^{2} n+42\right]+18 \\
& =n m(m+1)^{2}+m(16 n-24)+8 m^{2} n+8 m n+66 m+18 \\
& =n H_{1}\left(S_{m+1}\right)+m H M_{1}\left(P_{n}\right)+8 m^{2} n+8 m n+66 m+18 \\
& 9 m n(m+2)^{2}+2 m\left(m^{3}+m^{2}-15 m+16\right)+8 \\
& H M_{2}\left(B_{m, n}\right)=9 m n(m+2)^{2}+2 m\left(m^{3}+m^{2}-15 m+16\right) \\
& =m^{3}[9 n+2 m+2]+(16 n-30)\left[\frac{9}{4} m\right](m+1)-\frac{144}{4} m^{2}+\frac{119}{4} m+8 \\
& =[9 n+2 m+2] \mathbf{H M}_{2}\left(S_{m+1}\right)+\left[\frac{9}{4} m\right](m+1) \mathbf{H M}_{2}\left(P_{n}\right) \\
& -\frac{144}{4} m^{2}+\frac{119}{4} m+8
\end{aligned}
$$

## 5 Conclusion:

Thus,from above results we can conclude the Zagreb indices of product graph $\boldsymbol{B}_{\boldsymbol{m} \boldsymbol{n}}$ with respective Zagreb indices of its factor graphs satisfy Vizing conjecture like results, where $\boldsymbol{a}$ represents various Zagreb indices
